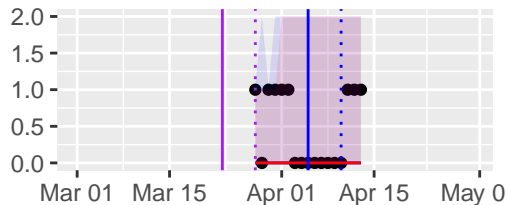

Figure 1 is a line graph showing the daily number of new cases (black dots) and the estimated number of cases (red line) from March 1 to May 0. The y-axis represents the number of cases, ranging from 0 to 5. The x-axis represents time, with major ticks for Mar 01, Mar 15, Apr 01, Apr 15, and May 0. A vertical purple line is drawn at Mar 15, and a vertical blue line is drawn at Apr 01. A shaded purple area represents the confidence interval around the red line. The red line starts at 0, remains at 0 until Mar 15, then jumps to 1, stays at 1 until Apr 01, then jumps to 2, and stays at 2 until Apr 15. The black dots represent daily new cases, showing a peak of 3 cases around Apr 15.

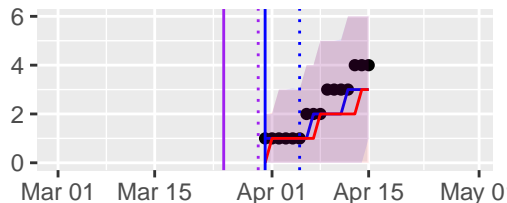

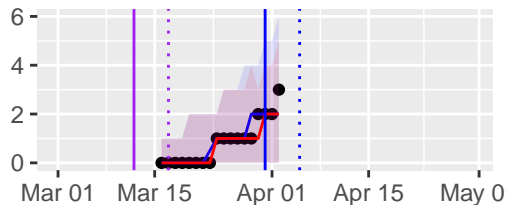

Figure 1 is a line plot with markers showing the daily number of deaths (black dots) and the estimated number of deaths (red line) from March 1 to May 0. The y-axis represents the number of deaths, ranging from 0 to 6. The x-axis shows dates from March 01 to May 0. A shaded purple area represents the uncertainty interval. A vertical purple line is drawn at approximately March 17, indicating the date of the first case in the United States. The data shows a sharp increase in deaths starting around April 1, peaking at approximately 5 deaths per day by April 15, and then declining.

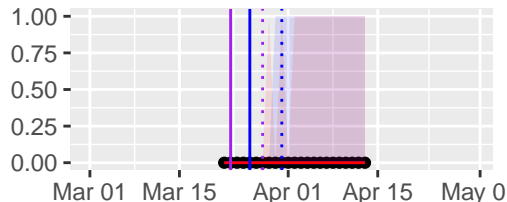

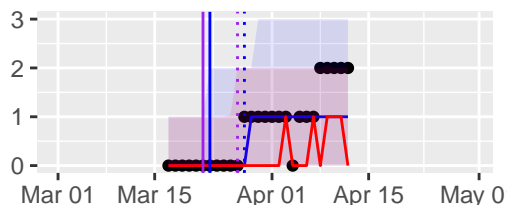

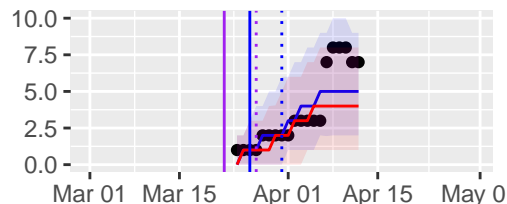

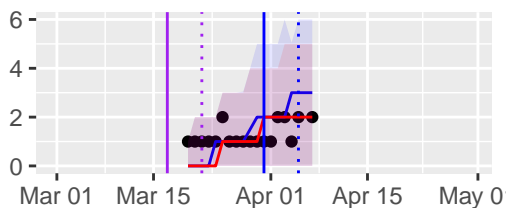

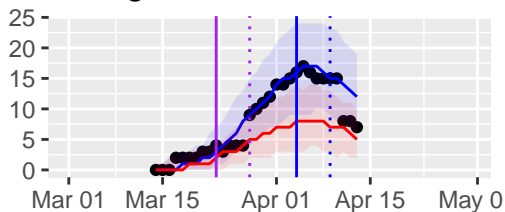

Figure 1 is a line graph showing the daily number of new cases (black dots) and the estimated number of new cases (red line) from March 1 to May 1. The y-axis represents the number of cases (0 to 6). The x-axis shows dates. A blue shaded area represents the uncertainty interval. Vertical blue lines indicate the dates of the first and second waves.
