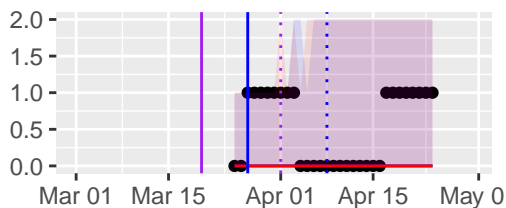

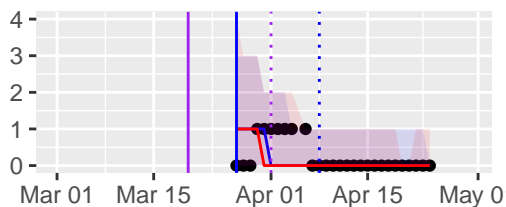

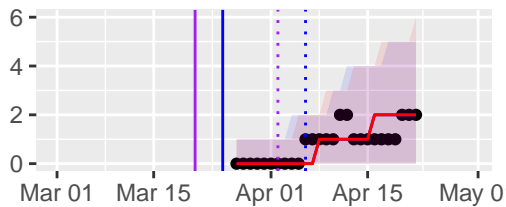

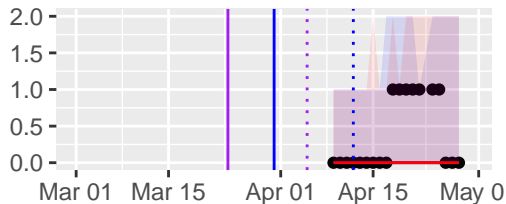

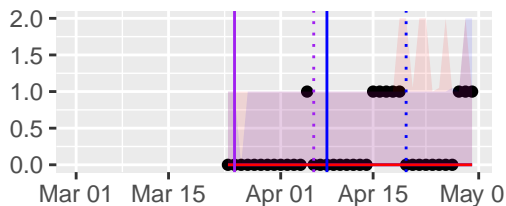

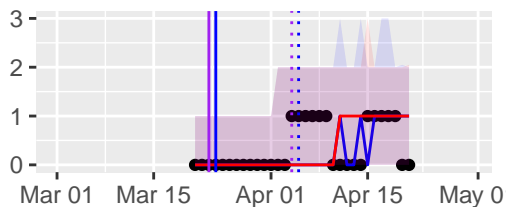

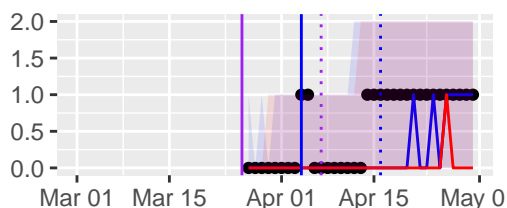

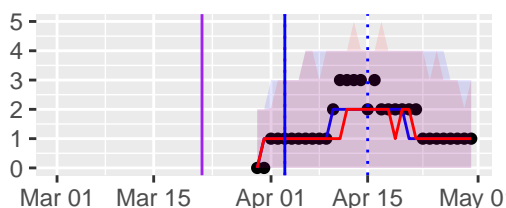

Figure 1 is a line plot showing the number of cases (black dots) and deaths (red line) in the United States from March 1 to May 1, 2020. The y-axis represents the number of cases or deaths, ranging from 0 to 4. The x-axis represents time, with major ticks for March 1, March 15, April 1, April 15, and May 1. A shaded area represents the uncertainty interval, which is light purple. Vertical lines indicate the dates of the first case (blue line) and the first death (red line). The first case occurs around March 20, and the first death occurs around March 25. The number of cases increases sharply in early April, reaching a peak of 4 cases around April 15, and then fluctuates between 2 and 4 cases until May 1. The number of deaths remains low, with a peak of 2 deaths around April 15, and then fluctuates between 1 and 2 deaths until May 1.
