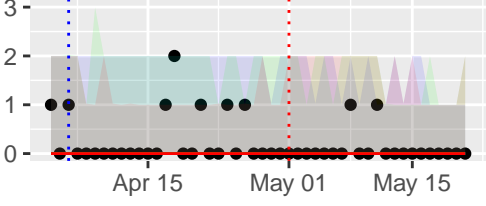

Figure 1 is a line graph showing the daily number of new cases (black dots) and the number of cases in the incubation period (colored areas) from May 1 to May 20, 2020. The y-axis represents the number of cases, ranging from 0 to 6. The x-axis shows dates: May 04, May 11, and May 18. A red vertical dashed line is at May 05. The incubation period is divided into three segments: 0-5 days (blue), 5-10 days (green), and 10-15 days (purple). The graph shows a peak in new cases on May 05, followed by a decline and then a smaller peak on May 12. The incubation period areas show the cumulative number of cases in each segment, with the 0-5 day segment (blue) being the largest.

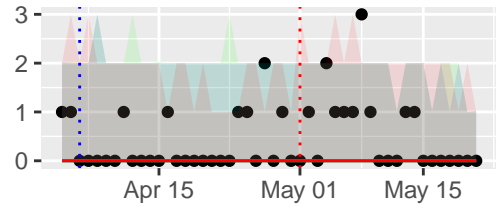

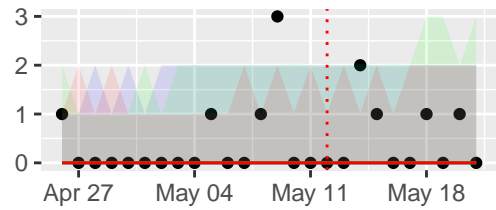

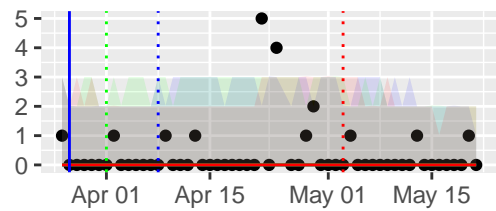

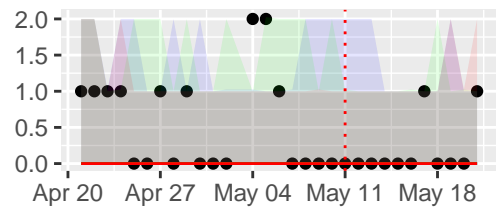

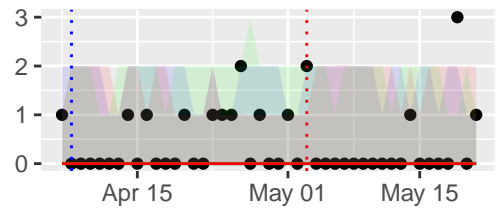

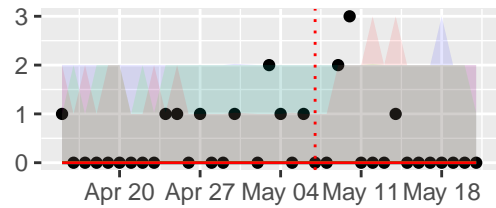

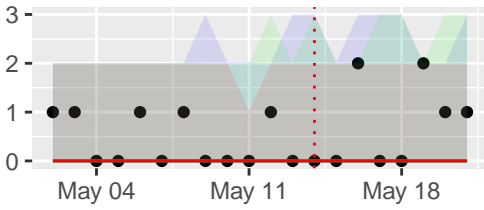

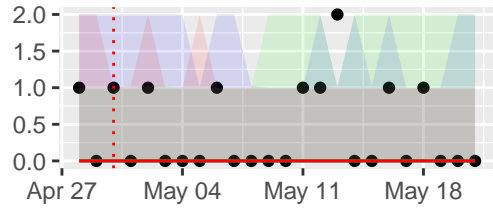

Figure 1 is a line plot showing the number of cases per day for COVID-19 in the United States from April 1 to May 15, 2020. The y-axis represents the number of cases, ranging from 0.0 to 7.5. The x-axis shows dates: Apr 01, Apr 15, May 01, and May 15. The plot features multiple colored lines (black, green, blue, red, purple, etc.) representing different states. A shaded gray area indicates the overall distribution of cases. Vertical dashed lines of various colors (blue, green, blue, red) mark specific dates: approximately April 5, April 12, April 18, and May 12.
